### ***Reasons for Allowance***

1. The following is the reasons for allowance of claims 1-14: The present invention is a system and a method for broadcasting stereoscopic video data to a client on the internet based on MPEG-4. Independent claims 1 and 8 identify distinct and unique limitations "receiving any one among two-dimensional video display mode, field-shuttering video display mode and frame-shuttering video display mode from the client; and generating an real-time transport protocol (RTP) packet for real-time transmission on the Internet by multiplexing elementary stream (ES) based on the inputted display mode, and transmitting the RTP packet to the client". The prior art of record disclose MPEG-4 based encoding and transmission of stereoscopic video data, however the prior art of record fail to anticipate or render the above limitation obvious singularly or in combination.
